

CenturyLink® Platform as a Service (PaaS) (IaaS)

Platform as a Service (PaaS) via the Cloud

By leveraging Microsoft's Government Community Cloud, CenturyLink's PaaS supplies an environment in which software developers can build and deliver web-based applications and services. Once built, an application is run on the Azure servers and is delivered to the users over the Internet or a VPN private connection. CenturyLink's PaaS includes tools for application design, development, testing, deployment, and hosting.

Product Description

CenturyLink's PaaS is a FedRAMP compliant solution that enables agencies to deploy and employ applications using proven Microsoft Azure Platform software tools. CenturyLink's PaaS complies with all of the NIST SP 800-145 defined cloud service essential characteristics to enable scalable, reliable and resilient applications support. It is a measured service that enables on demand self-service, location independent resource pooling, and rapid elasticity. It is reachable worldwide from CenturyLink's network as well as through the public Internet.

KEY FEATURES

- Tools for design, development, testing, hosting
- Compliant with all listed standards
- Extensive security features: physical security, monitoring/logging, update management, antivirus/antimalware, penetration testing, DDoS, encryption

How PaaS is Provided

CenturyLink's PaaS is a government community cloud that Microsoft designs, operates, and hosts. It is a measured service that enables on demand self-service, location independent resource pooling, and rapid elasticity.
