

# CenturyLink® Software as a Service (SaaS)

## SaaS Delivered via the Cloud

SaaS uses a web browser (or thin-client) to access cloud based applications, - the cloud service consumer does not need to manage application installation setup, underlying operating system, servers, operations, etc. CenturyLink's SaaS solution capabilities combine independent software vendors, managed service providers, and other organizations that provide software platforms, applications, web services and enabling tools to meet an agency's SaaS needs.

## Product Description

CenturyLink SaaS offerings include: Microsoft Dynamics, Microsoft Office 365, Akamai Kona Site Defender, and Akamai Site Shield. With the addition of Microsoft Dynamics, agencies will gain a digital services platform that natively integrates with the technology that many offices already use (e.g., Office, Exchange, SharePoint, and Skype for Business). Unique to Microsoft Dynamics, the platform is designed for native integration with Microsoft Office. Akamai Kona Site Defender provides integrated website protection against DDoS and web application attacks. Akamai Site Shield defends agency origin servers by cloaking web infrastructure and reducing vulnerability, providing an additional layer of protection for critical websites and web applications.

### KEY FEATURES

- Proven application set
- Enhanced security
- Always up to date

## How SaaS is Provided

Connectivity to all Microsoft and Akamai services is accomplished either with a dedicated or Internet connection. CenturyLink's SaaS will ensure that connectivity from our SaaS to agency sites will be supported through communications services offered through the EIS contract, as required by agencies.

Federal Solutions Group Headquarters: 4250 N. Fairfax Drive Arlington, VA 22203
